

## Features & benefits

### Simple installation

- Boltless mounting for quick and easy installation and rotation

### Wavy Lock design

- Prevents rule insertion in the seam and ensures tight and solid closure

### Flexible, durable and safe

- Lightweight molded fiberglass backing prevents damage and injuries

### Enhanced performance dynamics

- High resilience to wear, uniform wear pattern, stable durometer

### Rapid delivery and support

- Always in stock and supported by a team of technical consultants

# REVO<sup>XD</sup>+

## Anvil Covers

### SUPERIOR DURABILITY AND PERFORMANCE

Revo-XD<sup>+</sup> high performance anvil covers are made from an innovative polyurethane composition and are specifically designed for high performance production lines. They are available in all sizes, thicknesses and are custom fitted to each press.

Offering the highest impact, abrasion and durability in the industry, they provide the highest field-proven converting performance under a wide range of conditions. Revo-XD<sup>+</sup> anvil covers are easily installed and rotated for an extended life cycle, while also offering superior surface grinding response.

When available, a density compensation design helps to stabilize the die cutting process in the lock area.
