

Features & benefits

Procut blade with custom profile

- Minimizes pressure on the cardboard
- Cuts cleaner and faster

Neo high flexibility ejection material

- Supports and releases the product without crushing
- Highly durable

TopMatrix® with multiple densities

- Improves pressure distribution
- Ejects waste with optimal efficiency

TrimSaver® with multiple components

- Minimizes pressure and lead edge impact

SYNERGY™

PERFORMANCE BY DESIGN

Introducing SYNERGY™, a world-class innovation in high performance die cutting, designed to meet the ever-growing need for performance in lighter weight cardboard conversion.

SYNERGY™ delivers consistent and durable on-press performance while preserving the structural and physical integrity of the finished product.

Our innovative design allows for better control of pressure parameters to calibrate components for optimal die cutting performance. The result is the perfect synergy between each component of the cutting die.

Production output is maximized, delivering waste-free die-cut blanks and bundles while maintaining the structural and physical integrity of the finished product.

This is SYNERGY™.

We make performance happen
